For a secure way of life

Web-based Surveillance & Control For PowerMax+

PowerLink enables users to observe and control their homes, offices and other premises via the Internet from wherever they may be - on the road, at work or on vacation. PowerLink extends the capabilities of PowerMax+ to create a fully-integrated, highly secure, and easy-to-use visual surveillance and control system.

Be Connected: PowerLink comes with a RS-485, Ethernet or WIFI camera and enables the addition of up to three cameras (purchased separately). The camera's color CMOS image sensors and advanced signal processing produce clear, high-quality images. It also features powerful image capturing and storage capabilities. Owners travel worry-free, knowing that, with PowerLink, they can observe and control their home or office systems anytime, from anywhere.

Be Informed: In case of an event, PowerLink immediately informs the owner via e-mail, text message and on-screen alerts*. With PowerLink, the owner is always in touch and in control.

Be In Control: PowerLink's flexible "Quickview" interface updates the status of the alarm system, home appliances and surveillance cameras at a glance. The user-friendly alarm interface enables the easy activation of cameras, muting of sirens, turning lights on and more. Be it a routine virtual visit or a post alarm response, PowerLink is the ultimate virtual control post.

Be Secure: PowerLink gives owners the ultimate in protection and control whenever and wherever they may be. By eliminating worry about what is going on in their absence, PowerLink does more than safeguard their property and possessions; it secures their mobility and peace of mind.

* Based on local service provider offered capabilities

- ▶▶ Light Server Solution
- ▶▶ Optional server hosting service available from Visonic
- ▶▶ A stand alone product - using an integrated web server solution
- ▶▶ No need for special software downloads at remote access point (ActiveX or JavaApplets)
- ▶▶ Simple installation with IP camera auto configuration
- ▶▶ Auto adaptation to home networks
- ▶▶ An easy-to-use, intuitive user interface, requires minimal training and support
- ▶▶ User authentication and SSL data encryption plus extended camera privacy options

PowerLink supports up to four different cameras simultaneously.

Which one fits your needs?

CAM-1000
